SHUOLONG LINK MESH PRODUCTS

Product Information

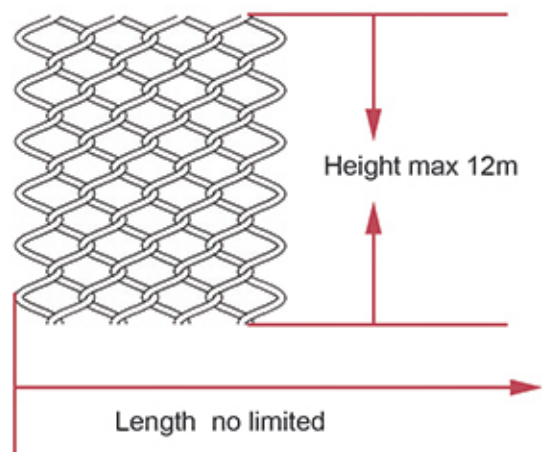

ShuoLong Link Mesh is a material that stirs the imagination of architects and designers. It provides color and texture, reacts beautifully to light, and is flexible and formable. Simultaneously open and closed, panels of mesh perform myriad functions in virtually any application and are available in unlimited lengths up to 40 feet in height.

Its flexible round weave fabrics weave wire fabrics are catching the eyes of today's designers. With its versatility, unique texture, variety of colors, durability and flexibility, ShuoLong link mesh is a long-term solution for today's modern style.

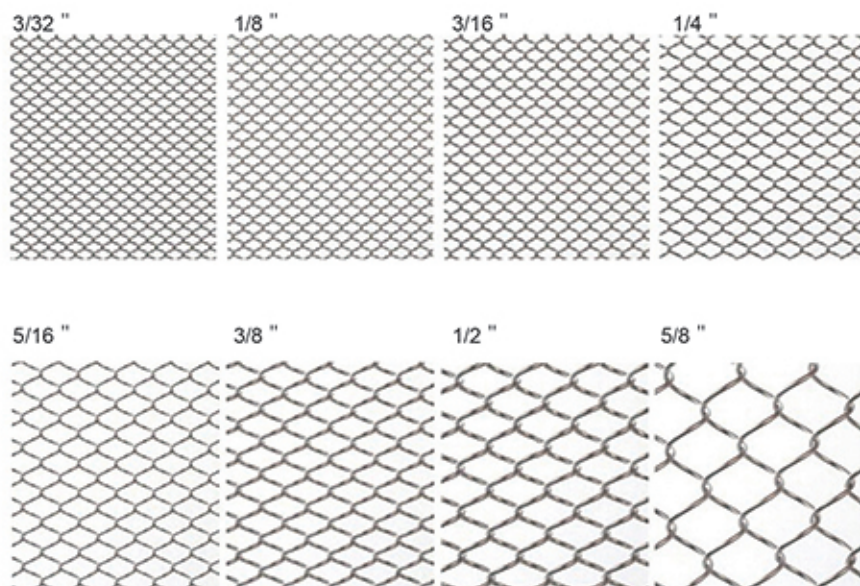

Compared to traditional woven metal mesh, ShuoLong link mesh gives you far greater design flexibility to meet your specific vision, functional requirements, and budget. You choose the material, gauge, color, coating/finish, weave thickness, open area and engineered attachment system that meets your design requirements.

Wire Diameter	0.8mm, 1.0mm, 1.2mm, 1.6mm or more. 80% customer choose 1.0mm, 13% customer choose 0.8mm, 5% customer choose 1.2mm
Opening Area	70%-85% can be chosen as uses situation
Height max	12m, more than 6m need to pay over length freight additional sa detail length
Length max	no limited, can be joint.
Functional Shuo Long Link Mesh	<p>Beautiful, functional, and sophisticated link mesh is a great way to creatively and affordably solve many common design challenges like those listed here-and more</p> <ul style="list-style-type: none"> • Adding texture • Daylighting • Diffusing light • Energy savings • Safety barriers • Sculpting space • Shading • Blast driven debris protection • Decorating • Dividing space • Fall protection • Screening • Securing • Ventilating
Feature	<ul style="list-style-type: none"> • Durable & Fire-proof • Recoverable and environment-friendly materials • Visually appealing • Allows ventilation • Light weight • Easy to install • See-thru proterty

- Screens
- Security Screens/Gates
- Shades
- Signage
- Water Features

About Fullness

ShuoLong Link Mesh as a curtain can create a billowing drapery effect by using more material than what is required to cover a given area. This effect is called "fullness" and is expressed as a percentage of additional material. Acceptable range for fullness is 100-200%, most customer choose 180%, demonstrably, 180% is the best choice for cost and effects.

BEAM FIX

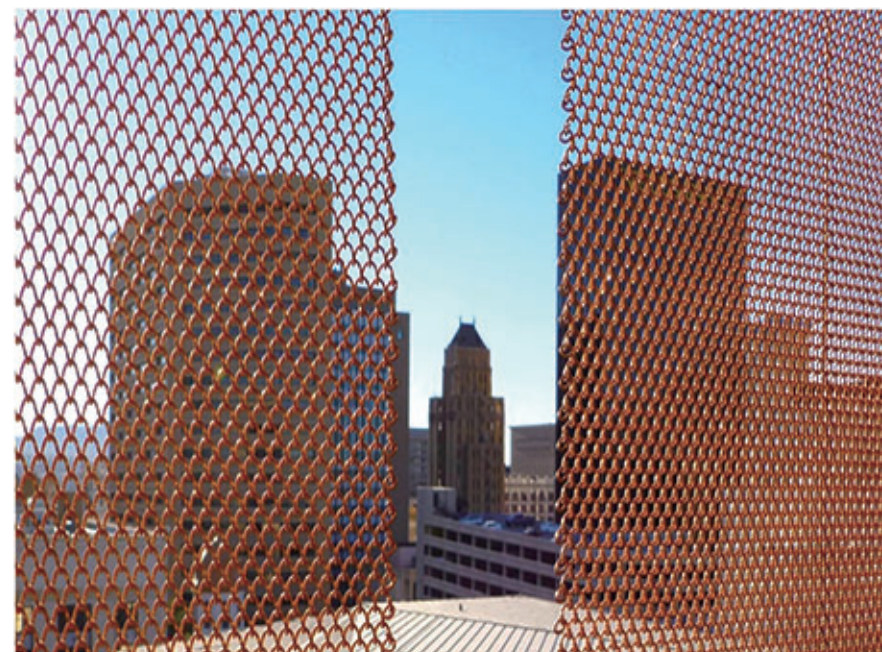

TUBE FIX

WISE FIX

WEAVE FIX

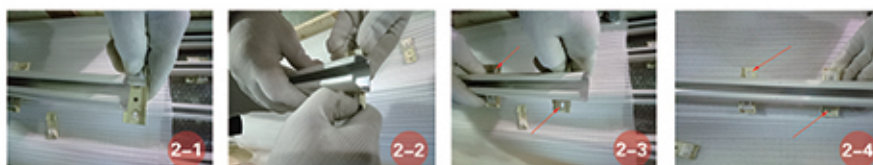

Installation process

1 Install one of the track end

2 Install brackets

3 Fix the track to the wall by brackets

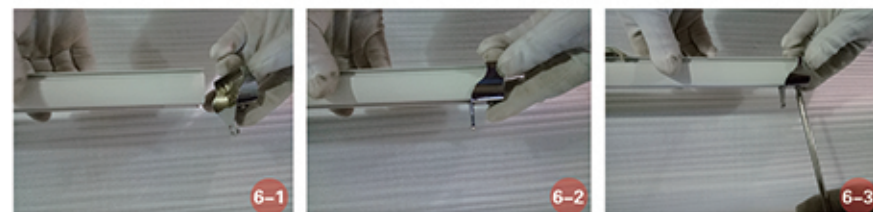

4 Joint the link mesh curtain and track

5 Lock two ends of the track and the link mesh curtain

6 Install the other of track end

About Materials

Material and gauge impacts weight, functionality, aesthetics, suitability for exterior applications, and more.

Wire material and gauge are selected based on the needs of your application. Our sales consultant will assist you in making the best selection for your project.

Bright steel wire

Our bright Low-carbon mild steel wire with a semi-bright finish, and it is coated by zinc, so it is corrosion proof and time proof. It is relatively high strength, durability, and low cost make it a great choice for a wide variety of applications. It can be paint any custom color. It is available in a wide variety of wire gauges and weave sizes.

Aluminum alloy

Aluminum alloy 5154 - H18 is an ideal material for our weaving process. Its ease of formability, high resistance to corrosion, excellent strength-to-weight ratio, and its natural aesthetic qualities make aluminum wire the obvious choice for most applications. Our Aluminum alloy Wire is very ductile - aiding the weaving process, making it more cost-effective to manufacture. Being non-ferrous, the material does not discolor or deteriorate in the majority of climates. Weighing almost 1/3 that of steel, Aluminum weaves can cover more area while adding minimal mass to its supports, again decreasing the overall cost. In its bare state, Aluminum Wire is light silver in appearance but can be painted any custom color. Additionally, our Aluminum Wire can be polished to be more lustrous, called Brightened Aluminum. All of its finishes are available in a wide variety of wire gauges and weave sizes.

Solid Brass

Our Solid Brass Wire is a beautiful natural golden color. As bare wire, Brass has a relatively high resistance to corrosion but can oxidize over time. A clear-coat finish can be added to preserve its natural color if desired. The wire's anti-magnetic and anti-spark properties coupled with moderate tensile strength make it a unique material for special applications.

Stainless Steel Type 304

Stainless Steel Type 304 is the most widely used variety of stainless steel. It is a slightly magnetic, highly corrosion-resistant material with a lustrous metallic finish. Its consistent wire surface quality, relatively high strength, and great corrosion resistance make it attractive for many applications. The wire can be drawn bare or with a black oxide surface. In its bare state, Type 304 has a lustrous metallic finish.

Stainless Steel Type 316

Stainless Steel Type 316 exhibits the highest level of corrosion resistance when compared to all other stainless steel types. It has a slightly higher strength than Type 304 and can handle higher temperatures. In most cases, Type 316 is used for all exterior applications where relatively high strengths and high resistance to oxidation or corrosion is required.

Galvanized Steel

Galvanized Steel Wire is our mild steel wire with a layer of zinc applied during the wire drawing process. The zinc coating adds a protective corrosion-resistant layer to the steel.

Aluminized Steel

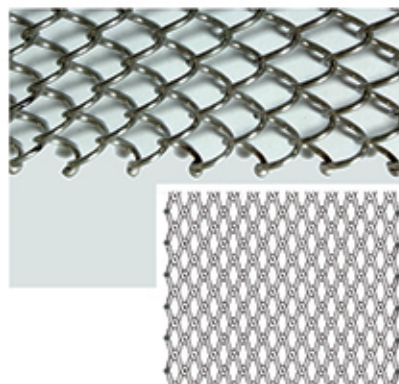

Aluminized Steel Wire is a corrosion-resistant steel material used primarily for exterior fencing applications. It is used for ShuoLong Link Mesh should be wire diameter at least 1.6mm.

Solid Copper

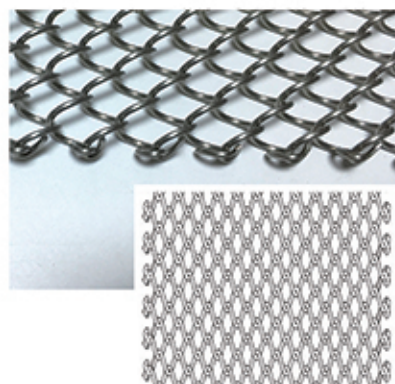

Solid Copper Wire exhibits a beautiful vibrant reddish color when first drawn. However, if left bare and untreated, the wire's appearance will slowly change to brownish hues and ultimately a grey/green patina.

Maintenance & Clean

Please don't allow acidoid or strong basicity materials to accumulate on the surface.

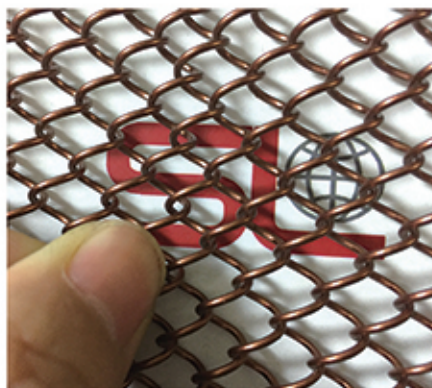

Please do not let sharp object scratched surface.

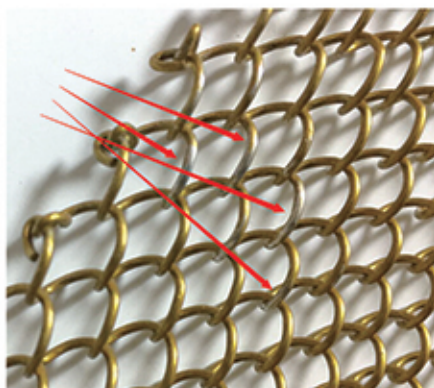

You should wash the product with mild detergent every 6-12 months. More often near the coast to prevent salt build up. Please avoid allowing things like paint, concrete, harsh cleaning materials, solvents etc to come into contact with your powder coating or fabrics. If this occurs please rinse with cold water and mild detergent or natural soap immediately.
